

HIGH POWER THICK FILM CHIP RESISTOR

TYPE CRGH SERIES | AEC-Q200 QUALIFIED

INTRODUCTION

The resistive element is screen printed and fired, and a passivation layer added. Each resistor is trimmed to tolerance by laser. The pre-scribed tile is then broken into strips, the end plating fired on, and the strips broken into individual components. Final termination finish is electroplated matte Sn over a Ni barrier layer. This high power resistor is now AEC-200 Qualified.

FEATURES

- Thick film resistors with high power to size ratio, ideally suited to industrial and general purpose use
- Value range from 1Ω to 10MΩ
- Seven Package sizes
- Terminal finish matte Sn over Ni
- AEC-Q200 Qualified

Temperature Range	-55°C - 155°C						
Ambient Temperature	70°C						

Notes:

1. * Rated continuous working voltage (RCWV) shall be determined from $RCWV = \sqrt{\text{Rated Power} \times \text{Resistance Value}}$, or Maximum RCWV listed above, whichever is less
2. **Recommended Circuit Board Design - If this device is anticipated to run at full continuous power then action to improve the cooling should be taken. This can be a metal substrate, copper pad left under the chip, an opening in the PCB or enlarged silver conductor pads each end.

Type CRGH Series I AEC-Q200 Qualified

DERATING CURVE

Resistors shall have a power rating based on continuous load operation at an ambient temperature of 70°C. For temperature more than 70°C, the load shall be derated as shown below

VOLTAGE RATING

Resistors shall have a rated direct-current (DC) continuous working voltage or an approximate sine-wave root-mean-square (RMS) alternating-current (AC) continuous working voltage at commercial-line frequency and waveform corresponding to the power rating, as determined from the following formula:

$$RCWV = \sqrt{P \times R}$$

Where:

RCWV = Rated DC or RMS AC continuous working voltage at commercial-line frequency and waveform (volt)

P = Power Rating (watt)

R = Nominal Resistance (ohm)

In no case shall the rated DC or RMS AC continuous working voltage be greater than the applicable maximum value.

MARKING

E24 series 0603 - 2512 3 Digits - first two digits denote significant figures of resistance and third digit denotes number of zeros thereafter.

Example

Marking for E96 Series 0805 - 2512 4 digits - First three digits denote significant figures of resistance and fourth digit denotes number of zeros thereafter.

Example

For ohmic values below 100R letter "R" denotes decimal point.

Example

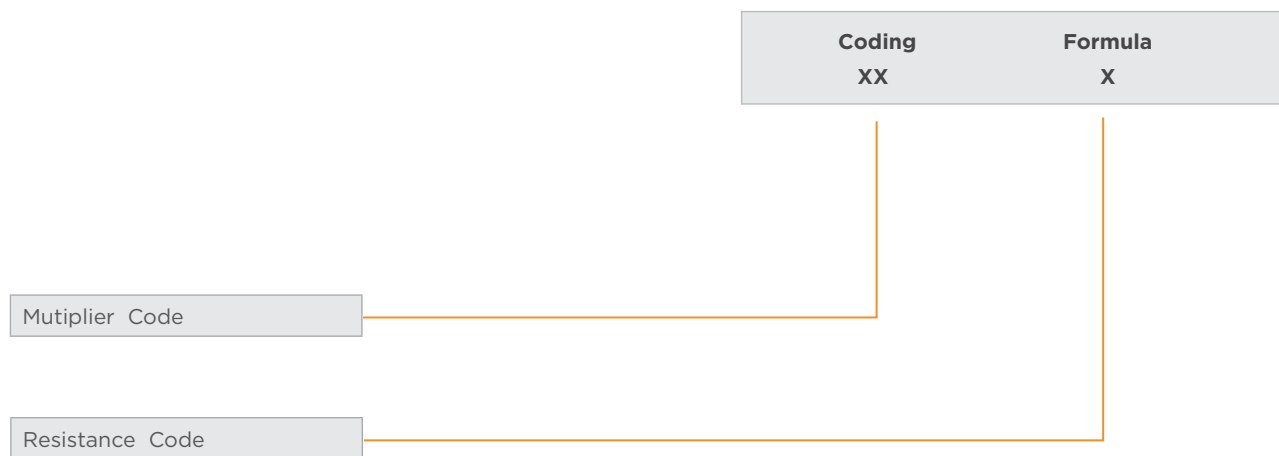

0402 size chips are not marked

0603 E96 3 digit marking.

ENVIRONMENT RELATED SUBSTANCE

This product complies to EU RoHS directive, EU PAHs directive, EU PFOS directive and Halogen free.

OZONE LAYER DEPLETING SUBSTANCES

Ozone depleting substances are not used in our manufacturing process of this product.

This product is not manufactured using Chloro fluorocarbons (CFCs), Hydrochlorofluorocarbons (HCFCs), Hydrobromofluorocarbons (HBFCs) or other ozone depleting substances in any phase of the manufacturing process.

STORAGE CONDITION (MSL1)

The performance of these products, including the solderability, is guaranteed for a year from the date of arrival at your company, provided that they remain packed as they were when delivered and stored at a temperature of $25^{\circ}\text{C} \pm 10^{\circ}\text{C}$ and a relative humidity of $60\%RH \pm 10\%RH$, chemical and dust free atmosphere.

Even within the above guarantee periods, do not store these products in the following conditions otherwise, their electrical performance and/or solderability may be deteriorated, and the packaging materials (e.g., taping materials) may be deformed or deteriorated, resulting in mounting failures.

1. In salty air or in air with a high concentration of corrosive gas, such as Cl_2 , H_2S , NH_3 , SO_2 , or NO_2 .
2. In direct sunlight.
