Assembling and Installation Method

Installation method

■ Do not insert a screw more than 6mm from the outside of a power supply to keep enough insulation distance between the screw and internal components.

Normal position

- If you use two or more power supplies side by side, please keep a sufficient distance between them to allow enough air ventilation.
- Ambient temperature around each power supply should not exceed the temperature range shown in “Derating”.

Derating

● PMA15F,PMA30F Input voltage Derating Curve

● Ambient temperature Derating Curve (Reference value)

- In the hatched area, the specification of Ripple, Ripple Noise is different from other area.
- The ambient temperature should be measured 5 to 10 cm away from the power supply so that it won't be influenced by the heat from the power supply. Please consult us for more details.
- Make sure the temperature at point A and point B is less than the temperatures shown in Instruction Manual 3.
